

CSE115L - Homework 01

Total Marks: 10

Name:	ID:	Section:
-------	-----	----------

Question 1 - Swapping Two Integers (3 marks)

Write a C program that asks the user to enter two integers **a** and **b**. Swap (interchange) their values so that **a** gets the original value of **b** and **b** gets the original value of **a**. Print the values after swapping.

Example:

Enter a: 7

Enter b: 3

After swapping, a: 3 and b: 7

Question 2 - Arithmetic Operations (3 marks)

Write a C program that asks the user to enter two integers. Calculate and print the **sum**, **product**, **difference**, **quotient**, and **remainder** of the two numbers.

Example:

Enter first number: 10

Enter second number: 5

Sum = 15

Product = 50

Difference = 5

Quotient = 2

Remainder = 0

Question 3 - Celsius to Fahrenheit Conversion (4 marks)

Write a C program that takes a temperature in **Celsius (C)** as input from the user and converts it to **Fahrenheit (F)** using the following formula. Print the converted temperature as output.

$$F = C * (9.0 / 5.0) + 32$$

Submission instruction: Write each solution as a complete C program. Use meaningful variable names and make sure your program compiles and runs correctly.
